

CRANES, HOISTS & WEAPONS HANDLING SYSTEM

Shipboard bridge cranes and hoists to perform a range of functions.

KEY BENEFITS

- Inherently safe
- High reliability
- Low maintenance
- Easy to operate
- Stabilized against ship motion
- Light weight

CRANES, HOISTS & WEAPONS HANDLING SYSTEM

Over 150 Weapons Handling and Stowage Systems for 11 Navies on 13 Different Ship Classes—

These highly reliable and safe systems are used to handle and store various types of torpedoes and missiles used on board surface combatant vessels.

DESIGN

The modular design can be configured to operate in virtually any ship magazine for weapons stacks up to 3-high by 10-wide. The system can store a wide variety of weapons by using weapons inserts in the universal chock system. Protective plates are positioned between warheads to prevent sympathetic detonation. Fail-safe features prevent unplanned movement of the weapon during handling.

The overhead crane incorporates telescoping stabilizing tubes that restrict any pendulation of the weapon during lifting and transit. The overhead crane is completely operated by the use of compressed air, thereby eliminating any possibility of sparking as would be the case for electrically operated equipment. The equipment is designed to withstand and remain operational during and after a shock event.

SYSTEM TYPES

- Boat & Aircraft Maintenance Cranes
- Bridge Cranes
- Cargo & Weapons Handling Cranes
- Close-In Weapon Systems
- Custom Traveling Roof Systems
- Ordnance Cranes
- Overhead Gantry Cranes
- Side port Stores Cranes
